

# GREENOUT

## INTENSE TURF COLOURANT

Colourant for use on turf and for restoration purposes.

GREEN is ideal for hydroseeding as it imparts a pleasant greenish colour to identify treated areas. Also ideal for line marking on playing fields.

GREENOUT is an deep blueish green dye

Unlike alternate paint or latex based colourants which tend to damage healthy turf.

GREENOUT is a water based dye which does not block plant pores and allows transpiration and growth.

GREENOUT is longlasting and does not wash off if applied correctly and allowed to be adsorbed by the plant.

For hydroseeding mixes GREENOUT is applied at 0.1 – 0.3 L/100L of mix.

For broadacre application, GREENOUT is applied at 2 – 4 Litres per hectare (depending on water volume and intensity of colour desired)

Addition of the special wetting agent BREAKTHRU GOLD is recommended for maximum effect.

GREENOUT is an easy to use liquid available in 1, 5 and 20 Litre packs.
