

SST: a key solutions provider for hort industries

SST is a key solutions provider for the agricultural and horticultural industries.

Within its portfolio SST has more than 70 innovative products that help control weeds, pests and diseases; and that promote crop growth.

Committing to the Australian agricultural and manufacturing sector is a key pillar in the strategy of SST, and as such, SST has just commissioned a new purpose-built manufacturing facility in Dandenong South, Victoria.

In addition, the firm has opened a dedicated Innovation Centre at the Green Chemical Futures Building at Monash University.

This partnership will provide the company with access to best-in-class research resources to perform applications research and development, ensuring the SST legacy of quality and innovation continues.

For more information on SST Australia products, visit sstaustralia.com or phone 03 9720 6306 to discuss your requirements.

At the Green Chemical Futures building at Monash University (pictured), SST have a dedicated Innovation Center. That partnership provides SST with access to best-in-class research resources to perform applications research and development.

SST are investing in the development of a purpose-built blending and manufacturing facility for their products—focussing on increasing capacity.

SST's Waiken®—the ultimate dormancy management tool

For ideal dormancy management in apple and cherry crops, Waiken® puts you back in control.

Waiken's application timing allows you to set back or bring forward flowering to suit market or growing conditions.

Compacts flowering

Waiken is a reliable dormancy management tool, compacting the flowering period to significantly improve the effect of chemical thinning treatments, therefore through more uniformly mature fruit.

Thanks to its proprietary chemistry, Waiken allows growers to capitalise on more profitable early markets.

Allows cross pollination

Not only does Waiken deliver benefits to growers in the short term, it is also a very important tool for growers in the long term sustainability of their operations.

Waiken helps promote limb growth in young fruit trees and also has the ability to bring forward bud-break to help align flowering across varieties to achieve cross-pollination, adding to its outstanding management characteristics.

Protection from frosts

Interest in Waiken initially arose following grower requests for a viable product that assists with bud-break and accurate flowering in low chill environments.
